

Does your MedSpa give pedicures?

Medical pedicures are INCREASING IN DEMAND. Why? Because your clients – whether they be Baby Boomers, Soccer Moms or anyone who gets pedicures – are worried. They worry is very basic. The media has been reporting that too many salons and spas are not practicing safe hygiene, and their patrons – especially those who get pedicures – can be in danger of contracting staph, fungal and hepatitis C infections. As you know, some of these conditions can even be fatal!

As you are aware, the MedSpa industry is expanding rapidly, and this includes the demand for medical pedicures. As people realize the potential danger they place themselves in by receiving regular pedicures, this demand will only increase more, especially as MedSpas such as your market, your services and safeguards.

The gravest threats are staph and hepatitis C infections. For example, hepatitis C can live through most sterilizing processes required by state boards of barbering and cosmetology. Autoclave devices are the only to ensure that pedicure files are totally sterilized, yet most pedicure files cannot withstand the heating process. The Angelfeet pedicure file is the only file made completely from surgical-grade steel, making it the only file that can withstand the sterilization process necessary for a safe pedicure. In addition, it does an outstanding job of providing a professional pedicure – our clients say it is the best file they have every used.

“Medi pedi’s” are a great way to build new business. They bring new customers into your spa who may never consider doing so, or who are hesitant to come in. Pedicure clients are great repeat customers, and now they will know about your other services.

I’m writing this letter to tell you that I’ve been in the business for over 26 years, and I know that this is the best pedicure file that has ever been made!

Thank you for your time,

Tammy Pollasky
